

Willow Data Lineage Explorer — Design

The Data Lineage Explorer provides end-to-end traceability for any fact or decision Willow makes. It enables regulatory audit, debugging, and trust calibration.

Core Capabilities

- Click any fact → see source system, ingest event, timestamp
- Traverse backward: Decision → Facts → Business Records
- Traverse forward: Business Record → Derived Facts → Decisions
- Highlight inferred vs canonical data

Data Model

```
(:Fact)-[:DERIVED_FROM]->(:Customer|:Policy)
(:Episode)-[:CREATED]->(:Fact)
(:Fact)-[:HAS_PROVENANCE]->(:IngestEvent)
```

Outcome

Every answer Willow gives can be justified with a traceable evidence chain.
